

MACHINERY OPERATIONS MANAGER WITH LEAN EXPERIENCE

Main duties and responsibilities

Responsible for effective and successful management and coordination of overall machinery production activities, including management of labour, productivity, quality control and safety measures as established for the Machinery Production Department.

Develops the machinery production by active and gradual implementation of lean manufacturing methods, i.e. makes recommendations to improve productivity, quality, profitability and the efficiency of machinery operations. This includes training associates on LEAN tools, planning and facilitating Kaizen events, monitoring performance versus improvement targets, sustaining changes made during events and execution of continuous improvement projects.

Essential duties and responsibilities:

- Oversees a workforce in the machinery production department. Closely monitors production to identify issues and resolve them promptly in order to secure on-time delivery.
- Determines amount of necessary resources (workforce, raw materials etc.). Evaluates the machine resources to ensure productivity and minimal downtime. Participates in creation of schedules for employees to ensure optimum staffing level to meet specifications and deadlines.
- Drafts and designs cellular layout of equipment, materials and workspace to illustrate maximum efficiency.
- Strives to reduce expenses and increase productivity across all product lines, i.e. designs and optimizes manufacturing processes for the improvement of existing products and the introduction of new ones; investigates and recommends technology and/or process changes to facilitate cost savings and continuous capacity improvement.
- Facilitates continuous improvement activities through regular Kaizen events that would contribute to the improvement of the key business metrics such as OTD, productivity, EBITDA, scrap rate, accident rate or inventory turns.
- Promotes LEAN culture throughout the machinery plant and contributes to adoption of the LEAN philosophy (5S, VSM, regular GEMBA walks etc.) in the whole company (promoting, encouraging and demanding the LEAN principles).
- Cooperates with HR department in the recruitment process, performance evaluation, promotion, retention and termination activities, as well as identification of the training needs.
- Ensures all employees follow industry standard health and safety guidelines. At the same time secures that employees stick to the workflow policies and technology procedures to ensure that final products meet quality standards and customer specifications.
- Provides motivation, support and guidance to the machinery production team.

Required qualification and skills

- Minimum Bachelor's degree in the field of Production Management, i.e. Mechanical Engineering, Manufacturing Management, Machine & Equipment Construction, Production Technology, Process Engineering etc.
- 5+ years' experience in leading manufacturing operations.
- 3+ years' of lean experience in manufacturing sphere.
- Certification in Lean Sigma / Six Sigma / Green Belt / Black Belt.

What we offer

- Interesting job in multinational company
- Motivating salary
- Dynamic work in a modern work environment
- Stable, friendly and professional team
- Possibility of professional growth and development
- Benefit programme (e.g. canteen allowance, pension/life insurance allowance, 5 weeks of vacation, etc.)

If you are interested in the offer, please send us your CV by e-mail or deliver it to the HR office. If the position requires knowledge of a foreign language, the CV must also be submitted in that foreign language.
